operated at full power. The balance 3060 MWe uses indigenous natural uranium, of which there is a mismatch in demand and supply. This capacity is, therefore, being operated at lower power levels matching indigenous fuel supply.

The feeder replacement work at RAPS-2 is completed and the unit is ready for fuel loading. The coolant channel replacement work at NAPS-2 and KAPS-1 will be completed during the year 2009-10. Efforts are being made by the Government to augment indigenous fuel supply by opening new mines and augmenting processing facilities. In addition, the fuel for reactors identified as civilian in the Separation Plan can be imported. Improvement of the capacity utilization through higher indigenous Uranium production and imports will be possible only progressively.

Cases investigated by CBI
